

$$R\text{-alg} = \{ (S, f) \mid S \text{ is a ring, } f: R \rightarrow S \text{ ring hom.} \}$$

$\varphi: S_1 \rightarrow S_2$  is a map of  $R$ -algs. if

$$\begin{array}{ccc} & R & \\ f_1 \swarrow & & \searrow f_2 \\ & G & \\ S_1 & \xrightarrow{\varphi} & S_2 \end{array}$$

$$\varphi \circ f_1 = f_2$$

Every ring is a  $\mathbb{Z}$ -alg in a unique way.

$k[x_1, \dots, x_n]$  is a  $k$ -alg

$k \rightarrow$  degree 0 polys.

If  $S$  is an  $R$ -alg

$R\text{-mod} \rightarrow S\text{-mod}$

$M \rightarrow M \otimes_R S$

$$s \cdot (m \otimes s_0) := m \otimes ss_0$$

$$(s_1 + s_2) \cdot (m \otimes s_0)$$

$$= s_1 \cdot (m \otimes s_0) +$$

$$s_2 \cdot (m \otimes s_0)$$

$\vdots$

$$S\text{-mod} \rightarrow R\text{-mod}$$

$$M \rightarrow M$$

$$r \cdot m = f(r) m$$

If  $M$  is an  $R$ -module,  $N$  is an  $S$ -module,

$$\text{then } \operatorname{Hom}_R(M, N) = \operatorname{Hom}_S(M \otimes_R S, N)$$

Prop: Let  $U$  be a mult. closed subset of  $R$ .  
Then  $M \otimes_R R[U^{-1}] \cong M[U^{-1}]$ .  
M an  $R$ -module.

(This is as  $R[U^{-1}]$ -modules,  $R[U^{-1}]$  is an

$R$ -alg. under  $\varphi: R \rightarrow R[U^{-1}]$  given by

$$\varphi(r) = \frac{r}{1}$$

Proof:

$$M \otimes_R R[u^{-1}] \xrightarrow{\sim} M[u^{-1}]$$

$$m \otimes \frac{r}{u} \rightarrow \frac{rm}{u}$$

$$m \otimes \frac{1}{u} \hookrightarrow \frac{m}{u}$$

is well-defined

If  $\frac{m}{u} = \frac{m'}{u'}$ , then  $m \otimes \frac{1}{u} = m' \otimes \frac{1}{u'}$ .

$$\frac{m}{u} = \frac{m'}{u'} \Rightarrow \underbrace{vu m'} = vu' m$$

$$m \otimes \frac{1}{u} = \left( \frac{vu'}{vu} \right) \left( m \otimes \frac{1}{u} \right)$$

$$= \underline{(vu' m)} \otimes \left( \frac{1}{vu u'} \right)$$

$$= (vu m') \otimes \left( \frac{1}{vu u'} \right) = m' \otimes \frac{1}{u'}$$

*QED*

$$\varphi: R \rightarrow R[u^{-1}] \quad \text{by } \varphi(r) = \frac{r}{1}.$$

Prop. a) The map  $I \rightarrow u^{-1}(I) R[u^{-1}]$   
from  $\{\text{ideals of } R[u^{-1}]\} \subset$  is the identity.

b) The map  $I \rightarrow \varphi^{-1}(I)$  from  
 $\{\text{ideals of } R[u^{-1}]\} \rightarrow \{\text{ideals of } R\}$

is an injection that preserves  
inclusion, intersection, and primality.

$$(1) \quad \mathcal{J} = \varphi^{-1}(I) \quad \text{for some } I \subset R[U^{-1}] \quad (\Rightarrow)$$

$$\mathcal{J} = \varphi^{-1}(\mathcal{J} \cdot R[U^{-1}]) \quad (\Rightarrow)$$

$\forall u \in U$ , the image  $\bar{u}$  in  $R/\mathcal{J}$   
is not a zero-divisor.

Pl. a)  $I = \psi^{-1}(I) \cdot R[u^{-1}]$

$$I \supset \psi^{-1}(I) \cdot R[u^{-1}]$$

w.t.s.  $I \subset \psi^{-1}(I) \cdot R[u^{-1}]$

$$\frac{r}{u} \in I \Rightarrow \frac{r}{1} \in I$$

$$\Rightarrow r \in \psi^{-1}(I)$$

$$\Rightarrow \frac{r}{u} \in \psi^{-1}(I) \cdot R[u^{-1}]$$

$\frac{r}{u}$  is an elt.  
of  $\psi^{-1}(I)$  times,  
an elt. of  
 $R[u^{-1}]$

$$b) \quad I \rightarrow \psi^{-1}(I)$$

$$J R[u^{-1}] \leftarrow J$$

$I \rightarrow \psi^{-1}(I)$  is an Injection

$J \rightarrow J \cdot R[u^{-1}]$  is a surjection

- Preserving finite intersection and inclusion:  
 $\psi: R \rightarrow S$   
 If  $S_1 \subset S_2 \subset S$ , then  $\psi^{-1}(S_1) \subset \psi^{-1}(S_2)$

$\varphi^{-1}(S_1 \wedge S_2) = \varphi^{-1}(S_1) \wedge \varphi^{-1}(S_2)$  is true  
on sets.

If  $\varphi: R \rightarrow S$ ,  $I \subset S$  is an ideal

$R/\varphi^{-1}(I) \hookrightarrow S/I$ . If  $I$  is prime,

$S/I$  is a domain,  $R/\varphi^{-1}(I)$

is as well, so  $\varphi^{-1}(I)$  is prime.

$f: R \rightarrow S$ . If  $\exists g: S \rightarrow R$  s.t.

$g \circ f = \text{id}$ , then  $f$  is injective and  $g$  is surjective.

$$f(a) = f(b) \Rightarrow g(f(a)) = g(f(b)) \Rightarrow a = b$$

If  $r \in R$ ,  $g(f(r)) = r$ ,  $\exists z = f(r) \in S$   
s.t.  $g(z) = r$ .

$$c) \quad \mathcal{J} = \varphi^{-1}(I) \text{ for some } I \Leftrightarrow \mathcal{J} = \varphi^{-1}(\mathcal{J} R[u^{-1}])$$

$\Leftarrow$  is clear

Assume  $\mathcal{J} = \varphi^{-1}(I)$  for some  $I$ .

$$I \supset \mathcal{J} \cdot R[u^{-1}]$$

$$\mathcal{J} = \varphi^{-1}(I) \supset \varphi^{-1}(\mathcal{J} \cdot R[u^{-1}]) \supset \mathcal{J}$$

$$\Rightarrow \mathcal{J} = \varphi^{-1}(\mathcal{J} \cdot R[u^{-1}])$$

$J = \psi^{-1}(JR[\psi^{-1}]) \Rightarrow \bar{u} \in R/J$  is a non  
 zero-divisor  $\forall u \in U$ .

Assume  $J = \psi^{-1}(JR[\psi^{-1}])$

$R/J \hookrightarrow R[\psi^{-1}]/JR[\psi^{-1}]$

$\left( \begin{array}{l} \bar{u} \text{ must be} \\ \text{a non zero divisor} \end{array} \right) \Rightarrow \bar{u} \in U \text{ is a unit}$

$$\bar{u} \cdot \bar{x} = 0 \quad \text{in} \quad R/J \quad \Rightarrow$$

$$\bar{u} \cdot \bar{x} = 0 \quad \text{in} \quad R[u^{-1}]/J R[u^{-1}]$$

$$\bar{u}^{-1} \bar{u} \cdot \bar{x} = 0 \quad \text{in} \quad \text{---} //$$

$$\bar{x} = 0 \quad \text{in} \quad \text{---} //$$

$$\bar{y} = 0 \quad \text{in} \quad R/J.$$

Assume  $u \in U$  never reduces to a  
zero-divisor in  $R/J$

Choose  $r \in \psi^{-1}(JR[u^{-1}])$

$$\frac{r}{1} \in JR[u^{-1}] \Rightarrow \frac{r}{1} = \frac{j}{u} \quad j \in J, u \in U$$

$$\Rightarrow \exists v \text{ s.t. } vur = vj \quad \text{in } R$$

$$\bar{v}\bar{u}\bar{r} = \bar{v}\bar{j} = 0 \quad \text{in } R/J$$

$$\bar{v} \bar{u} \bar{r} = 0 \quad \text{in } R/J$$

$$\Rightarrow \bar{r} = 0 \quad \text{in } R/J$$

$$\Rightarrow r \in J$$

$$\Rightarrow J \supset \varphi^{-1}(J R[u^{-1}])$$

$$J \subset \varphi^{-1}(J R[u^{-1}])$$

$$\Rightarrow J = \varphi^{-1}(J R[u^{-1}])$$

Cor.: If  $R$  is hermitian, then  
 $R[U^{-1}]$  is as well.
